The MeditronFO Auditable Pipeline for Clinical LLMs

Fully-open base models

Clinicians co-authored synthetic data prompts & MOOVE questions

1 Data

MOOVE adversarial questions (train) → SYNTHETIC adversarial Qs

Clinical Practice Guidelines → SYNTHETIC Qs based on Guidelines

Source Medical QAs → Source & SYNTHETIC Medical Qs

The data sources come from three diverse medical datasets

Large scale synthetic generation of datasets, from source examples

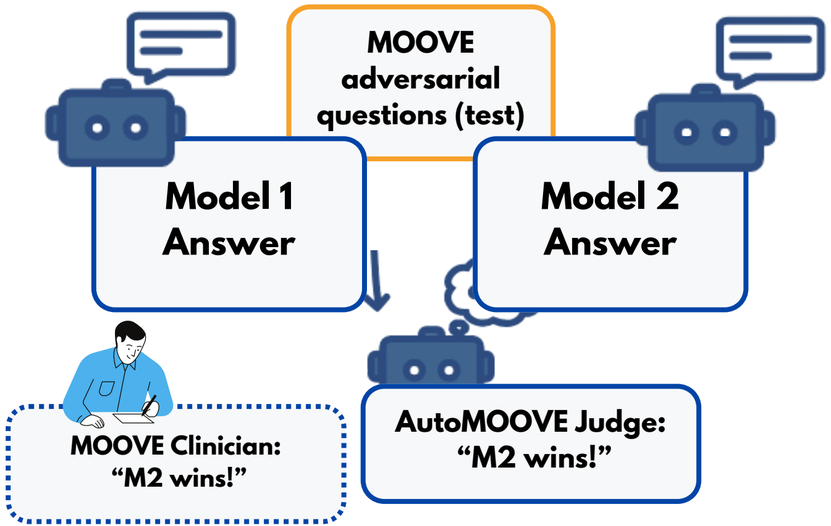

Rejection-sampling distillation generates the answers to the synthetic datasets with a strong open-weight teacher model

2 Model

MEDITRONFO
Fully-open medical models

SFT on the combination of synthetic adversarial QAs, synthetic guidelines QAs, and the source and synthetic medical QAs

3 Evaluation

AutoMOOVE: Automated clinical evaluation, the AutoMOOVE judge is first validated on blinded human clinician evaluations on MOOVE
